

## Control Modules and Manifolds

A control module is the pneumatic equivalent of an electronic circuit board.

All interconnecting circuitry is contained within the body of the module block, whilst an infinite amount of components (pneumatic, electrical or electronic) can be integrally or surface mounted.

### Features and Benefits:

- ◆ Minimal interconnecting pipework
- ◆ Compact 'plug and play' design
- ◆ Easily identifiable port connections
- ◆ Minimises maintenance requirements
- ◆ Attractive aesthetics
- ◆ Simplified ordering
