AIR PREPARATION UNITS
LUBRICATOR Series L1
LUBRICATOR - 1/4, 3/8, 1/2, 3/4, 1 "

## Features

- Conforms to ISO 6301-1
- Suitable for Modular mounting
- Fog / Mist type
- Fine adjustment of lubrication
- Steel bowl guard, bayonet type on L14, L15 \& L17 models and threaded type on L13 mode
- Lubrication proportional to flow

## Technical Specifications

| Model | L13 | L14 | L15 | L17 | L17 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Medium | Compressed air - Filtered |  |  |  |  |
| Port size | G1/4 | G3/8 | G1/2 | G3/4 | G1 |
| Flow rate (Its / min) @ | 1350 | 3000 | 5650 | 7200 | 9000 |
| Maximum supply pressure (bar) | 10 |  |  |  |  |
| Ambient / Medium temperature | $5^{\circ}-50^{\circ} \mathrm{C}$ |  |  |  |  |
| Min operating flow (Its / min) | 12 | 40 | 45 | 50 | 50 |
| Bowl capacity (ml) (at maximum oil level) | 20 | 57 | 152 | 200 | 200 |
| Recommended oil | ISO VG 32 (Servo System 32) |  |  |  |  |
| Bowl material | Polycarbonate |  |  |  |  |
| Installation | Vertical (as in the picture) |  |  |  |  |
| Materials of construction | Aluminium, Bronze, Steel, Acetal, Polycarbonate, SS, Nitrile |  |  |  |  |
| Optional accessories * | Clamp, Modular mounting kit |  |  |  |  |
| Weight (Kg) | 0.19 | 0.30 | 0.56 | 1.3 | 1.2 |

[^0]
## Precautions

1. Note the direction of flow before installation and connect piping accordingly.
2. Flush pipings for dirt, dust, rust and other foreign particles.
3. Install in clean atmosphere.
4. Nipples of taper threads ( $R$ ) to be used with teflon tape. Ensure teflon tape does not enter the unit during tightening. Nipples of straight threads ( G ) to be used with sealing washer.
5. Polycarbonate bowls may get damaged and possibly fail if exposed to synthetic oils, thinner, solvents, trichloroethylene, kerosene or other aromatic hydrocarbons.
6. Oil may be filled when under pressure. However it is recommended to vent the air completely before filling the oil.

## LUBRICATOR Series L1

## Flow Graphs

1/2" LUBRICATOR

## How to order

L1

## Principle of Operation

A part of the air entering the Lubricator through " IN " pressurises the bowl chamber. Flow of full air goes through " OUT " deflecting the " Deflector " and creating pressure drop below the sight dome.
The pressure in the Bowl presses the oil through the suction tube and the oil flows through the sight dome. All the oil drops seen through the sight dome mixes with the main - stream air and comes through " OUT ". The required oil drops can be adjusted by the adjusting needle.

Ordering example : Lubricator - 3/8 port size ( with G3/8 port ) : Ordering No: L1462

[^0]:    @ Supply pressure 6 bar, pressure drop $\Delta \mathrm{p}=0.5$ bar ( For standard models )
